PRODUCTION-STANDARD COVERAGE

Weavly Base Plan

Lifecycle, costing, entitlement, export, and stress-test findings from the retained pilot account.

FIELD	VALUE
RUN	BASEPLAN-COVERAGE-20260731
ENVIRONMENT	textile-accounting.vercel.app
ACCOUNT	Retained Base owner pilot account
TENANT	BASEPILOT-20260730074621-8C0D1F-Factory
SCOPE	Base / Estimator only

PRODUCTION PILOT GO

The Base / Estimator pilot is production-ready for controlled customer use. The P0 billing retry-price defect is closed, base-rate validation/duplicate/concurrency hardening is deployed, and user-provided Razorpay screenshots show successful INR 8,260 Netbanking payment, active Base subscription, and estimator access. Remaining items are P1 breadth and UX follow-up, plus one browser-harness limitation.

Prepared 31 July 2026 / Asia-Kolkata

01

Executive readout

The account was used as a real user would use Base: create, revise, archive, reopen, export, and cross the plan boundary.

CURRENT RUN

Direct checks across yarns, qualities, costing, settings, export, billing, route boundaries, console, and tenant reconciliation.

CURRENT RESULT

P0 Base blockers are closed. Production build and database are aligned and ready for the pilot.

FOLLOW-UP

P1 breadth coverage remains for optional toggles, archive/restore, mobile dialogs, and a clean two-tab capture.

What passed today

- Yarn edit preserved the previous value and history, then archived the QA rate without deleting historical context.

- Quality save validation blocked incomplete input; update changed name and rates; delete became an inactive soft-delete.

- Costing v1 remained immutable while v2 changed quantity and transport; comparison surfaced the exact commercial delta.

- Internal and customer PDFs downloaded successfully; customer output kept internal economics hidden.

- Business name/default changes saved and restored; organization export completed; Base premium boundaries held.

Non-blocking follow-up

- Retain authoritative reconciliation for the user-provided successful payment: one captured INR 8,260 payment and exactly one active Base entitlement.

- Linked yarn names are locked. This is safe behavior, but the business should document whether a replacement/migration workflow is required.

- Expand P1 breadth coverage for optional toggles, blend add/remove, saved-costing archive/restore, and 390px rate/settings dialogs.

02

Current run evidence

The tenant-scoped read-only reconciliation confirms the browser outcomes without exposing secrets.

OBJECT	PERSISTED	STATE	MEANING
Yarn trial	1 matching row	0 active / 1 archived	2 history rows; 123.45 -> 125.00 INR/kg
Quality lifecycle	1 inactive updated template	Soft-delete retained	Historical quote rows remain readable
Costing group	2 versions	v1 5,000 m / v2 6,000 m	Suggested price 22.98 -> 23.04 INR/m
Entitlement	1 active Base subscription	Current end 29 Aug 2026	Exactly one active Base row
Observability	0 console warnings/errors	Core routes exercised	No new browser log issues

Retention behavior that matters

The user-visible delete actions are intentionally non-destructive. A yarn is archived and a quality becomes inactive. This is the correct production pattern because old costings must still render their own recipe and rate snapshots after a user cleans up the active library.

Important interpretation

The quote record stores a landed-cost field separately from the estimator production-cost card. The reconciliation checked versions, quantities, quote prices, identities, and row cardinalities tenant-side; the two cost fields should not be compared as if they were the same metric.

03

Lifecycle findings

The highest-value Base user journeys and the production-standard conclusions.

Yarn Rate Book

Add, edit, history, archive, refresh, and review metadata worked. Negative/range inputs and duplicate names are guarded server-side with inline feedback. Stale edits are rejected by the deployed versioned save path. A linked yarn name remains locked in the edit sheet.

Saved Fabric Qualities

Incomplete save was blocked with a field-level denier error. A valid quality was saved, renamed, rate-edited, and deleted with explicit confirmation. Tenant state shows the deleted template as inactive.

Saved Costings

The current QA costing moved from v1 to v2 without rewriting history. Reopen restored the recipe and commercial context. Compare and Start From were exercised, including the local-draft overwrite guard.

Exports and Settings

Both product PDF variants downloaded. Business name and estimator defaults were changed and restored. Organization export completed with the expected success message.

04

Executed acceptance matrix

Current-run checks. The larger stress matrix continues on the following pages.

ID	CHECK	RESULT	EVIDENCE
RATE-01	Add QA warp rate	PASS	New row with review cadence, source, notes
RATE-02	Edit and preserve previous	PASS	125.00 current; 123.45 previous
RATE-03	Linked-name edit guard	PASS	Name input disabled by design
RATE-04	History dialog	PASS	Two values with dates/source
RATE-05	Archive and reload	PASS	DB is_active=false
QUAL-01	Incomplete save guard	PASS	Blank denier blocked; no partial save
QUAL-02	Valid save	PASS	One warp + one weft template
QUAL-03	Rename and rate update	PASS	Name and INR 146/136 rates
QUAL-04	Delete confirmation	PASS	Soft-delete; history retained
EST-01	Save costing v1	PASS	5,000 m snapshot
EST-02	Reopen and update	PASS	Quantity/transport changed in v2
EST-03	Compare versions	PASS	5,000 -> 6,000 m and price delta
EST-04	Start From	PASS	Overwrite guard; independent draft
EST-05	Reset guard	PASS	Save remains disabled after reset
EXP-01	Customer quotation PDF	PASS	Downloaded; internal economics hidden
EXP-02	Internal cost sheet PDF	PASS	Downloaded with cost detail
SET-01	Business name update/restore	PASS	Saved, restored, reloaded
SET-02	Default update/restore	PASS	Target margin restored to 10%
SET-03	Organization export	PASS	Success toast and filename
NAV-01	Base route boundary	PASS	Today redirect; orders upgrade wall
OBS-01	Console check	PASS	No warning/error entries
DB-01	Tenant reconciliation	PASS	Lifecycle/version/entitlement agree

All new records created today used the BASEPLAN-COVERAGE-20260731 prefix. No non-QA record was intentionally mutated.

05

Stress matrix - auth, entitlement, yarns, qualities

Use these IDs as a repeatable production-readiness pack. Next-gate items need direct proof.

ID	SCENARIO	EXPECTED	STATE	PRI
AUTH-001	Valid owner login	Base estimator opens in correct tenant	Retest pass	P0
AUTH-002	Invalid login	Neutral error; no data leak	Retest pass	P0
AUTH-003	Password reset entry	No enumeration	Retest pass	P1
AUTH-004	Logout/protected reload	Returns to login	Retest pass	P0
AUTH-005	Cross-tab logout	Stale tab cannot continue	Retest pass	P0
NAV-001	Base navigation	Only Base routes exposed	Current pass	P0
NAV-002	Premium orders route	Upgrade wall; no data	Current pass	P0
BILL-001	Active billing view	Plan/date/upgrade truth	Current pass	P0
BILL-002	Successful first activation	One INR 8,260 payment + entitlement	Pass - user evidence	P0
BILL-003	Failed first purchase	No entitlement; truthful failure	Retest pass	P0
BILL-004	Retry after failed purchase	Still INR 8,260 activation	Retest pass - fix closeout	P0
BILL-005	Cancelled/abandoned retry	Same first-purchase pricing	Retest pass - billing closeout	P0
BILL-006	Duplicate webhook/retry	Idempotent rows	Retest pass - release suite/B17	P0
RATE-001	Add valid rate	One active row + audit metadata	Current pass	P0
RATE-002	Zero/negative/NaN	No row or partial history	Runtime + server guard pass	P0
RATE-003	Duplicate name policy	Conflict explicit	Unique constraint + inline feedback	P1
RATE-004	Update rate/history	Previous value retained	Current pass	P0
RATE-005	Rename linked yarn	Migration or clear lock rule	Locked by design	P1
RATE-006	Archive/cancel archive	Inactive on confirm; no-op on cancel	Pass	P0/P1
QUAL-001	Incomplete save	Validation; no partial row	Current pass	P0
QUAL-002	Valid save	Reusable template persists	Current pass	P0
QUAL-003	Duplicate/blank name	Reject or explicit policy	Save disabled/no duplicate	P1
QUAL-004	Update name/rates	Old snapshots unchanged	Current pass	P0
QUAL-005	Stale concurrent update	Reject timestamp conflict	Guard deployed; test pass; browser capture limited	P0
QUAL-006	Delete cancel/confirm	No-op cancel; soft-delete confirm	Pass	P0
QUAL-007	Start From quality	Independent identity/history	Retest pass	P0

06

Stress matrix - costing, export, settings, resilience

These checks protect financial correctness, history, and tenant isolation.

ID	SCENARIO	EXPECTED	STATE	PRI
EST-001	Single warp/weft formula	Independent oracle agrees	Retest pass	P0
EST-002	Blank required fields	Save/export guarded	Current pass	P0
EST-003	Negative/extreme inputs	No NaN/Infinity/overflow	Runtime + server guard pass	P0
EST-004	Waste/crimp boundaries	Blank default vs zero	Retest pass	P0
EST-005	Blend add/remove	Totals update safely	Non-blocking next gate	P1
EST-006	Loom/wage formula	Manual/formula consistent	Retest pass	P0
EST-007	Sizing mode	No duplicate charge	Retest pass	P0
EST-008	Overhead override	Included exactly once	Retest pass	P0
EST-009	Post-processing toggles	Only enabled charges	Retest pass	P0
EST-010	Party + quality context	Persists through export	Current pass	P0
EST-011	Save costing	One v1; duplicate safe	Current pass	P0
EST-012	Reopen/update	Immutable v2	Current pass	P0
EST-013	Compare snapshots	Delta accurate	Current pass	P1
EST-014	Start From costing	Independent save mode	Current pass	P0
EST-015	Draft recovery	Keep/overwrite clear	Current pass	P1
EST-016	Costing archive/restore	Retention action explicit	Non-blocking next gate; Base surface not exposed	P1
EXP-001	Internal cost sheet	Detailed economics	Current pass	P0
EXP-002	Customer quotation	Internal economics hidden	Current pass	P0
EXP-003	Latest export after refresh	No stale output	Retest pass	P1
EXP-004	Organization export	Tenant-only; redacted	Current pass	P0
SET-001	Business name edit	Save/reload persist	Current pass	P1
SET-002	Cost default edit	New costing uses defaults	Margin pass; toggle next	P0
SET-003	Optional section toggles	Reversible; snapshot-safe	Non-blocking next gate	P1
SET-004	Settings quality manager	Agrees with estimator	List observed	P1
RESP-001	390px estimator	No overflow; usable	Retest pass	P1
RESP-002	390px rate/settings	Dialogs operable	Non-blocking next gate	P1
OBS-001	Console warnings/errors	No new burst	Current pass	P1
OBS-002	DB reconciliation	UI/persisted agree	Current pass	P0

07

Release gate - billing and entitlement

The retry-pricing P0 is closed in production evidence. User-provided screenshots visually prove the successful capture path and Base access; the matching rate-concurrency deployment is now live.

CLOSED / BASE-BILL-RETRY-PRICE

Production closeout on deployment dpl_7aJizgchjx96eLG8pQzvCxGw1UhL / commit ed6e32a shows the retained failed-checkout account displaying INR 8,260 / first year and Pay INR 8,260 & Activate. The replacement checkout had no captured payment and no active entitlement, so no false access was granted. The current alignment deployment is dpl_3RhPZYDYUS2FYqwjrQAd2XBS67TV.

GATE	RESULT	FINDING
Failed payment truth	PASS	No captured payment and no active entitlement after failure
Retry price/lifecycle	PASS	Correct first-year INR 8,260 activation pricing restored
Successful Netbanking	PASS - user evidence	Success screen, active subscription through 31 Jul 2027, and estimator access shown
Plan boundary	PASS	Base routes available; Full Suite routes show upgrade wall

Non-blocking follow-up

- Retain authoritative reconciliation for one captured INR 8,260 payment and exactly one active Base entitlement.
- Decide the linked-yarn rename policy and document the locked-name behavior or build replacement migration.
- Expand P1 breadth coverage for optional toggles, blend add/remove, saved-costing archive/restore, and 390px rate/settings dialogs.

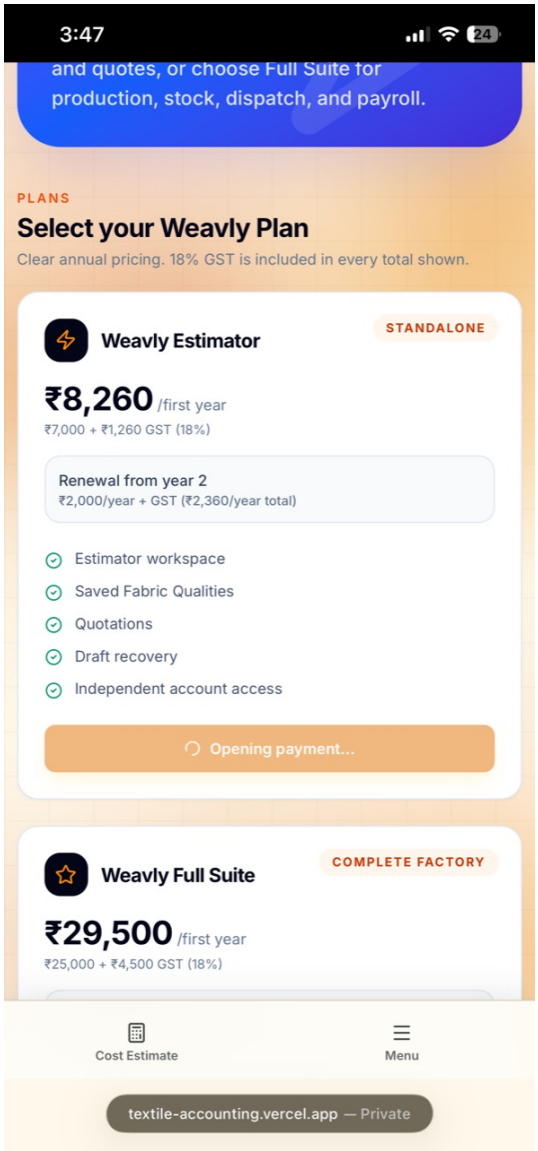

08

User-provided Razorpay proof

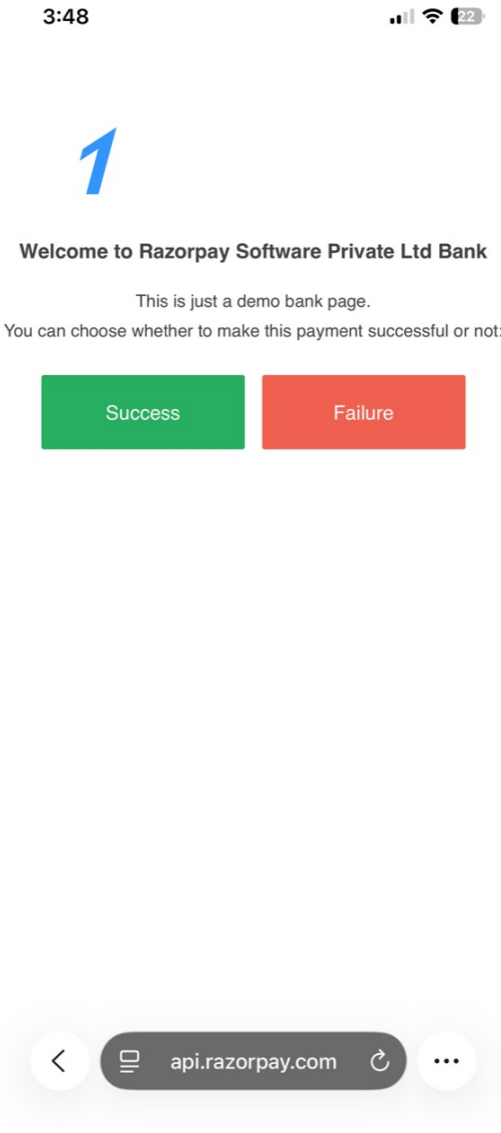

Safe screenshots supplied on 31 July 2026. Personal credentials and payment identifiers are intentionally excluded.

Initiation path

The first pair shows the INR 8,260 first-year Base price and the Razorpay demo bank success/failure decision point.

First-year plan price

Razorpay demo bank

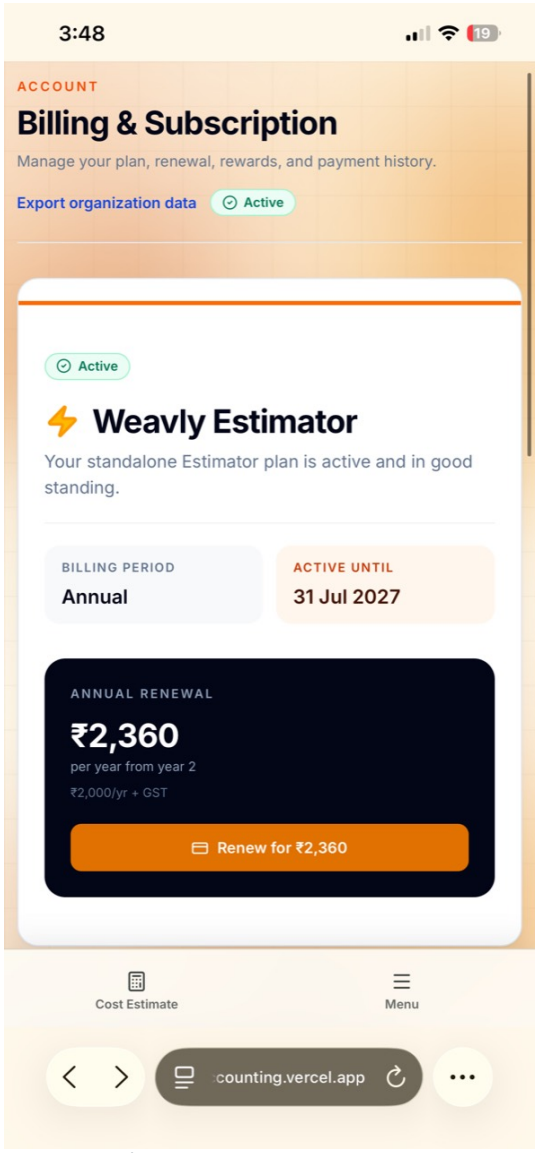

09

User-provided activation proof

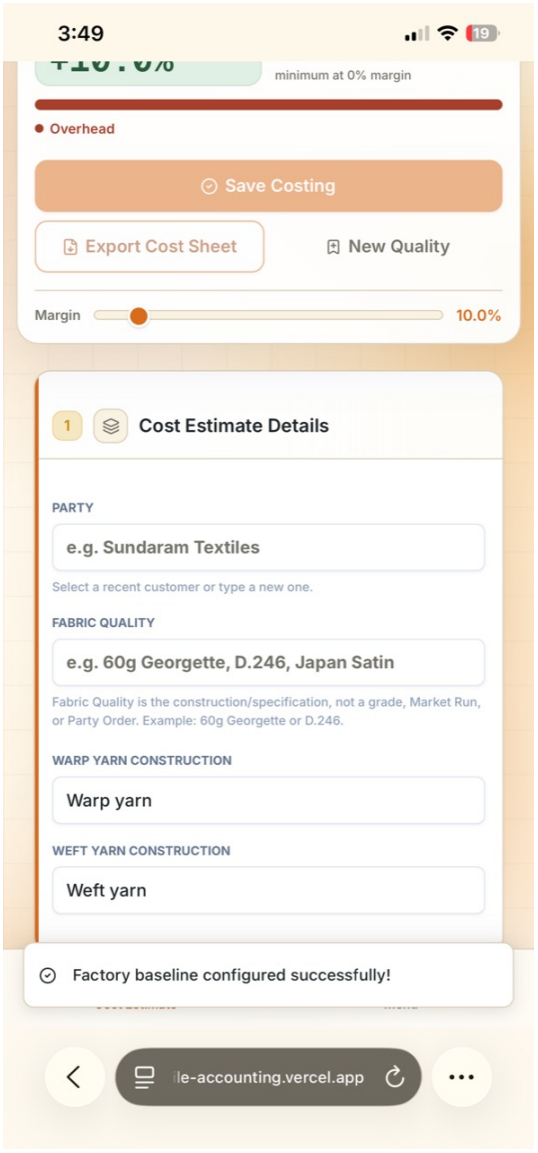

The second pair shows successful payment, active billing, and access to the Base estimator.

Activation and access

The supplied sequence shows Netbanking success, an active annual Estimator subscription through 31 July 2027, and the estimator workspace loading with Base actions available.

Active Base subscription

Estimator access

Evidence limitation: these images are user-supplied visual proof. The preferred final closeout is still a tenant-scoped reconciliation showing one captured payment and exactly one active entitlement.

10

Recommendation and handoff

The Base / Estimator pilot is production-ready. The remaining work is non-blocking P1 breadth coverage and operational evidence retention.

Recommended next move

Proceed with the Base pilot on the live production alias. Keep the authoritative payment/entitlement reconciliation artifact, document the linked-yarn locked-name policy, and schedule the remaining P1 UX and breadth checks as follow-up coverage.

#	ACTION	PRI	EXIT CONDITION
1	Retain successful payment and entitlement reconciliation	P1	One captured INR 8,260 payment + one active Base entitlement
2	Document linked-yarn rename policy	P1	Clear locked-name or replacement workflow
3	Expand optional/breadth/mobile coverage	P1	Blend, toggle, archive/restore, and 390px dialog checks
4	Capture clean two-tab stale-edit proof	P1	Browser harness supports stable tab/native-dialog run
